RobyNails

The newest nail enhancement method in 3 easy steps!

RobyNails Dip System is the new professional method allowing to get perfect results on all kind of nails in just 3 easy steps. Speeds up application, does not require UV/LED lamp, is easy to remove, has no odor, keeps nails healthy and is extremely durable with a permanent glossy finish.

No UV/LED lamp
required

Easy and quick
application

Extremely
resistant

Natural result and
excellent shine

Strong adhesion on
every nail type

Perfect to strengthen
natural nail

Ideal also for
extension with
tip and form

Easy removal

Calcium and Vitamin A, E
for healthier nails

10-Free Formula:

does not contain ingredients like Formaldehyde, Toluene, DBP

Products

BASE

Dip System Step 1. Liquid Base to be applied before Dip Powder, formulated to perfectly adhere to the natural nail and absorb the correct quantity of Dip Powder. Contains vitamin A, E and calcium for natural nail strengthening.

15 ml code 24001

FINISH

Dip System Step 3. Air dry Top Coat that gives extra hardness, protection and a perfect shining result.

15 ml code 24003

ACTIVATOR

Dip System Step 2. Brush on liquid which activates the drying process without need of UV/LED lamp. Assures hardness while maintaining the flexibility of the nail.

15 ml code 24002

DIP POWDER

Special extra-fine odorless acrylic powders specifically formulated for Dip System, available in several beautiful natural and color shades.

20 g

BRUSH SOFTENER

Special solvent useful for cleaning or softening brushes in case of hardening. You just need to insert the stiffen brush in the Brush Softener, wait a few minutes, then clean and completely dry before use.

Dip System

Instructions Dip System

Color on Natural Nail

NAIL PREPARATION

- ① Sanitize hands with the disinfectant Profumato.
- ② Push back the cuticles with the Cuticle Pusher.
- ③ Shape the nails with the Straight File or la Lima Dritta.
- ④ Prepare the nail with the Slim Buffer to remove the shine and to create a fine surface for the Dip System.

STEP 1 - BASE

- ① Apply an even layer of Base with low pressure over all nail and immediately dip the nail into the Dip Powder. Tap off excess powder.
- ② Repeat on all nails, one finger at a time.
- ③ Dust off excess powder with Soft Brush.
- ④ Repeat steps 1, 2, 3.

Step 2 - ACTIVATOR

- ① Apply a generous amount of Activator on all nails making sure to cover the sides of the nail and cap the free edge. Wait 2 minutes for drying. It is important that the brush is well saturated with liquid for each nail.
- ② File and shape nails with Straight File and buff with Slim Buffer to smooth the surface.
- ③ Remove any filing residues with Nail Brush.
- ④ Apply a second coat of Activator on all nails. Wait 1 minute to dry.
- ⑤ Clean nails with a dry Lint Free Wipe.

STEP 3 - FINISH

- ① Apply Finish on all nails of one hand with 2-3 quick brush strokes, without touching the cuticles. Wait 15 seconds.
- ② Apply a second layer of Finish, with a slower and more detailed motion, making sure to cover the sides of the nail and cap the free edge. Do not over brush because it may compromise the overall shine. Wait 3 minutes to dry.
- ③ Repeat steps 1 and 2 on the other hand.
- ④ Apply Cuticle Oil to the cuticles.

FRENCH EFFECT

In Step 1-Base, replace point ① with the following steps: apply one coat of Base over the entire nail and dip the tip of the nail into Dip Powder French White to create the smile line, tap off excess powder, immediately dip the entire nail into Dip Powder Natural Pink or French Pink and tap off excess powder. Proceed with point ②.

Video

Instructions Dip System

Color with Tip Extension

NAIL PREPARATION

Follow the same steps as indicated in the previous method.

TIP APPLICATION

Apply tip, cut to desired length, blend and shape. Brush off any filing dust with Nail Brush.

DIP POWDER NATURAL CLEAR APPLICATION

- ① Apply one coat of Base only on the junction of the tip with natural nail and immediately dip nail into Dip Powder Natural Clear. Tap off excess powder. Repeat on all nails, one finger at a time.
- ② Dust off excess powder with Soft Brush.
- ③ Apply a coat of Base over the nail keeping a slight distance from cuticle and immediately dip the nail into Dip Powder Natural Clear. Tap off excess powder. Repeat on all nails, one finger at a time.
- ④ Dust off excess powder with Soft Brush.

COLOR APPLICATION

Repeat the same steps as in natural nail color application.

DIP SYSTEM REMOVAL

- ① File off top shine from nail surface with Straight File.
- ② Saturate Nail Wraps with Gel Polish Remover and wrap all nails.
- ③ Wait 10/15 minutes. Remove Nail Wraps and lightly press with a rotating movement to remove any product residues. Make these steps on one nail at a time to avoid product drying.
- ④ Gently buff nails with Slim Buffer.

ALTERNATIVE FINISH WITH UV/LED TOP COAT

At point ② of Step 2-Activator, use the Straight File also for nail surface, so that it becomes more rough. Then proceed with the following steps: apply Quick Shine on all nails, place in LED lamp for 60 seconds or UV Lamp for 2 minutes. Finish with Cuticle Oil.

Dip System

Q&A

USEFUL RECOMMENDATIONS

FOLLOW THESE PRECAUTIONS DURING PRODUCT APPLICATION

Base. Brush lightly with low pressure, for an even application on one nail at a time. Dip each nail in the powder immediately after application.

Activator. Apply in generous amount. Wait until well dry. Before applying Finish it is important to clean the nail with a dry wipe.

Finish. First coat must be thin and applied in 2-3 very quick strokes on each nail avoiding over brushing on the same spot. Second coat should also be thin but applied with a slower more detailed motion, capping the nail edge. It is recommended to unload product excess using the rim of bottle before every application.

KEEP BASE BRUSH CLEAN FROM POWDER RESIDUES

To avoid Base brush getting dirty, it is important to dust off Dip Powder residues from the nail. It's also recommended to clean the brush on a dry wipe before putting it back in the bottle to prevent Base from getting powder residues.

KEEP FINISH BRUSH CLEAN FROM ACTIVATOR RESIDUES

Activator residues going inside Finish bottle may cause some filaments which could compromise product application. Therefore it is recommended to always clean Finish brush on a dry wipe before putting it back into the bottle.

USE THE BOTTLE NECK REDUCER TO UNLOAD THE BRUSH

The bottle has a rubber neck reducer very useful to unload the brush from product excess as well as to prevent the outside of the bottle neck from getting dirty. In case this happens, the cap would stick to the bottle making it difficult to open.

USE BRUSH SOFTENER IN CASE OF BRUSH STIFFENING

If Base or Finish brush stiffens, clean it with a wipe and soak it in Brush Softener for few minutes. After soaking, clean and dry well with a wipe before putting it back into the original bottle. The Brush Softener liquid should never get into Base or Finish bottles.

WHAT TO DO IF...

THE POWDER IS NOT WELL ADHERING TO THE NAIL

Not enough Base has been applied on the nail or too much time has passed before dipping the nail into the powder. Remove with file, apply Base again and dip finger into the powder.

FINAL RESULT IS NOT COMPLETELY SHINY

Activator was not completely dry before applying Finish or the first coat of Finish has been applied too slowly. Buff off the shine, apply Activator again and let it totally dry, then apply Finish as from instructions.

NATURAL NAIL SURFACE IS UNEVEN

In case of uneven or ridged natural nails, to smooth nail surface, apply a coat of Base and dip into Dip Powder Natural Clear before color powder application. Dip Powder Natural Clear dipping is also suggested for a natural nail overlay to strengthen weak or brittle nails.
